

Shelter Infrastructure & Damage Assessment

Shelter Expert Structural Audit & Displacement Vulnerability Analysis

1. Shelter Condition Breakdown

Shelter Type Category	Affected Units	Structural Severity	Intervention Priority
Makeshift Fabric / Nylon Tents	70% Damaged	Severe - Weather Vulnerable	Immediate Supply Needed
Overcrowded School Classrooms	20% Exceeded	Moderate - Sanitation Risks	De-congestion Needed
Unfinished Concrete Structures	10% Damaged	High - Safety Hazards	Reinforcement Needed

2. Predictive Winterization Directive

- **Pre-emptive Dispatch:** Direct high-grade waterproof tarpaulins and thermal insulation kits prior to heavy rainfall.
- **Drainage Protocol:** Construct elevated wooden pallet flooring and trench drainage to eliminate flooding.
- **Self-Repair Kits:** Issue timber and tarp maintenance kits to households in partially damaged structures.
